Subject: Agenda for Medford walk-through

Hi Claire,

Attached is a draft agenda for the meeting to walk through trading in Medford, let me know if you have any suggestions/ additions/ subtractions.

Also, Ranei requested that we send her specific questions that people are hoping to have answered. I've pasted Melissa's list at the bottom here (at least one of which is actually for EPA). As you are reaching out for folks to participate in the meeting, can you ask if there are specific ideas or questions people have and send them to me or Ranei?

Thanks
Carrie

How can EPA approve a compliance schedule longer than 10 years?

Did the TMDL set a baseline?

What was the baseline before people could earn credits?

Who monitors compliance?

How is Waste Load allocation expressed in TMDL?

How is effluent limit expressed in permit?

What are compliance points (in permit and in TMDL) and how are they monitored

What is the language in the TMDL that supports trading? Or what is the written setup in the TMDL that helped EPA be ok with the trading as part of implementation of the TMDL (nonpoint and in NPDES permits)?

How can citizens verify that NPDES permit conditions are being met?

How is reporting done for DMRs??
